Web-based AutoWatch™ vehicle monitoring device promotes safe driving habits and saves teen's lives!

Being a parent of a teenager is a daunting task and until now, all parents could do was wonder how their child was driving and hope everything was fine. AutoWatch for Parents™ from EASE Diagnostics is an unprecedented opportunity to monitor children's driving habits, encourage good driving and correct the child's bad driving habits...**EVEN WHEN THE PARENT IS NOT IN THE VEHICLE!** Now parents can be 'back seat drivers' and easily monitor how fast, how far, and when their child is driving.

EASE has totally revamped the AutoWatch™ line, that had been on the market for nearly ten years. It is now web-based, smaller, easier to use, more affordable, and now records live data rather than events such as a set speed being exceeded or going over a preset RPM level. By recording live data rather than event thresholds, AutoWatch™ is more useful than ever before. The simple to install AutoWatch™ plugs into the vehicle's diagnostic port and begins recording information as soon the car is turned on. The recorded information can be easily uploaded through your PC to the internet to be viewed and analyzed in user friendly reports. With the data in hand, a concerned parent can discuss driving habits with their child to educate and correct bad driving habits before it's too late.

The versatile AutoWatch™ vehicle interface can also be used to monitor driving habits of corporate fleets, monitor fuel efficiency, used as a scan tool to perform diagnostics and repair, report Diagnostic Trouble Codes (DTC's), clear DTC's, and many other uses.

EASE Diagnostics, headquartered in the Scott Technology Park, Olyphant, PA, is the industry leader in advanced electronic automotive information and diagnostic products. As winners of numerous industry awards for innovative product development, EASE products are the tools of choice for high tech repair shops throughout the world.
