Exploding In Car PC Use Spurs Introduction of Automotive Information Suite of Products at 2006 SEMA Show

The rising use of In Car PCs has led to numerous companies offering software for Navigation, Satellite Radio, DVD Players, Media Players, Address Books and other entertainment uses.

"Until now, no company has focused on the diagnostic and automotive information data being monitored by the car's internal computer systems," says Stephen Golenski, President of EASE Diagnostics. "The In Car PC is the perfect platform for utilizing automotive data in a variety of useful ways by capturing and transmitting data from the vehicle's computers to the In Car PC in a form that can be analyzed and reported in a simple and easy to understand format."

Capitalizing on it's many years of experience in the professional automotive arena, EASE developed a tiny Vehicle to PC Interface, powerful enough to handle dealer level diagnostic data and information on nearly all vehicles produced since 1996 to transmit automotive data to the In Car PC. This information allows EASE to design software packages of interest to all In Car PC users such as: Performance Measuring and Monitoring, Gauge packages with more useful gauges than any vehicle manufacturer's offerings, a diagnostic scan tool to view, graph and analyze live vehicle data, AutoWatch to track driving habits of teens and fleets, Data Logging to record diagnostic data and perform road tests, Vehicle Trip and Usage Analysis, Gas Mileage Tracking and Optimization to save money, DTC Alert to let the user know if the car is safe to drive or needs immediate attention, and Emissions Testing to determine if a vehicle is ready to pass a state emissions test. Many additional software programs are under development and will be released within the next few months.

EASE Diagnostics, headquartered in the Scott Technology Park, Olyphant, PA, is the industry leader in advanced electronic automotive information and diagnostic products. As winners of numerous industry awards for innovative product development, EASE products are the tools of choice for high tech repair shops throughout the world.
